TWENTY-FIRST ANNUAL REPORT

OF THE

TRUSTEES OF THE STATE LUNATIC HOSPITAL,

AT WORCESTER,

1853.

To His Excellency the Governor and Honorable Council:-

The Trustees of the Massachusetts State Lunatic Hospital, at Worcester, have the honor, pursuant to the requirements of law, to present their Annual Report "of the Condition of the Hospital, and its Concerns."

In reviewing the history of this institution for the past year, the Trustees find abundant cause to acknowledge with gratitude the protecting care of an overruling Providence, and feel to congratulate the people of the State, on the hitherto successful working of this great charity, when the imperfection of its means is considered.

The operations of the Hospital have been more extensive during the past, than in any preceding year. The number of patients within its walls, Dec. 1st, 1852, was 532, and there were received, 288, making 820, who were the recipients of its care and treatment within the year, and 4,458 since its first foundation.

The number of admissions have been 21 less than in the preceding year, while the whole number has been 45, and the average 22 more.

The admissions have been only from two sources, commitments by the Courts, and commitments by Overseers of the Poor. Its doors have been closed to private applications, and many who have sought an entrance here, have been turned over to neighboring institutions.

This course was dictated by the crowded condition of the Hospital, there having been in it an average of 147 more than it was designed to accommodate.

There were discharged during the year, 300; of whom, 145 are reported recovered, 36 improved, 41 incurable and harmless, 37 incurable and dangerous, and 41 to have died.

Most of the incurable and harmless were sent to their friends, and to towns to which they were chargeable; and the incurable and dangerous being such as the law authorized to be sent to Houses of Correction, were removed thither in accordance with the provision of the statute for relieving the crowded condition of the Hospital.

In the middle of summer, the unprecedented number of 567 patients had become residents within its walls. Indications of diseases incident to the season began to show themselves, and created a just apprehension, that a fatal epidemic was impending over this crowded, but ill-ventilated establishment.

In this emergency, the Trustees, in the early part of August, decided upon relieving its crowded condition, by sending off one hundred of its inmates, and an order was passed for the purpose. But so soon as it began to be executed, remonstrances and entreaties came back so earnest from the officers of the establishments to which they were sent, that the order was only partially carried into effect. It was stated by them, that their respective establishments were already more than full, and that those sent to them would be placed in a far worse condition than they would be in, were they to remain in the Hospital; in fact, that they could not be received.

The fears of an epidemic having subsided with the disappearance of the indications which gave rise to them, and the general health of the patients being as good as ordinary, in the latter part of August, when the order had been only partially executed, its further enforcement was suspended.

A very large and still increasing proportion of the admissions

is of foreigners. This subject has been repeatedly alluded to in former Reports, and needs not to be enlarged upon at this time. The facts and suggestions in relation to this matter, contained in the Report of the Superintendent, are commended to the consideration of the government. Unless something is done to avert it, the benefits of this institution will soon be denied to our native population, except to such as may be paupers or criminals. It is fast filling up with a class of incurable foreign paupers, which circumstance is already seriously impairing its usefulness as a curative institution. It is also manifest, that further provision must be made for the custody and management of the insane. According to the last census. the hospital provision for the insane, in the whole country, is equal to only about twenty-five per cent. of the whole number. In Massachusetts, the provision is in a much greater ratio to the whole number, but yet far short of what it should be.

In New York and Pennsylvania, the residence of the paupers sent by the counties into their State Hospitals, is limited by law to six months, unless, in the opinion of the superintendents, a longer residence shall be deemed of importance to their recovery. At the expiration of the period allowed, they are sent back to the county poor-houses. This renders these Hospitals essentially curative institutions, by preventing them from becoming filled with incurable paupers.

In this State, if only those who have been sent from this Hospital for the want of room, in the last two years, together with those who ought now to be sent from it, in order to reduce the number of its inmates to 400,—the maximum that ought to be retained,—were to be sent to Taunton on the opening of that Hospital, they would fill it to its utmost capacity. But it is known that these constitute but a part of those, who are waiting for the opening of that institution to become its inmates.

It is suggested in the Superintendent's Report, that some of the incurable and harmless State paupers may be sent to the State Almshouses. The suggestion is deserving of a favorable consideration. It may also be thought expedient to construct apartments in connection with those establishments, for the same class of incurable and dangerous patients, and particularly for epileptics, who only require safe custody. In this way, they might be taken care of at a less expense to the Commonwealth, and at the same time, be the recipients of all the care and attention demanded by the most enlightened

philanthropy.

The Hospital at Worcester, needs some extensive repairs and improvements to enable it to sustain its former high reputation, and make it conform to the present advanced state of science, as applied to such institutions. At the time this Hospital was built, the whole subject of the moral, and we may say, the physical treatment of the insane, was comparatively in its infancy.

It is only a little more than half a century ago, (in 1792,) that M. Pinel, of France, first made known the true theory of the moral treatment of the insane. Prior to his time, Hospitals or Asylums existed, in which the insane were lodged, not so much generally, for the purposes of treatment and cure, as to relieve the public and their friends, from the annoyance and

danger of their presence.

These asylums were sometimes monasteries, sometimes prisons, and generally built on the model of prisons, in which the patients were either locked up in cells or dungeons, or chained by the neck and limbs to massive stone walls. The treatment generally consisted of exorcisms, whippings, and the broth of serpents at the full of the moon. No classifications were attempted; but the violent and the timid were huddled together in the same room. Yet, in spite of all this error and absurdity, some recovered; for insanity is sometimes paroxysmal and self-limited.

But a brighter day was to dawn on those bereft of their reason. Pinel arose and asserted, that the insane were controllable by moral influences; that they might be won by kindness, and restored to reason by gentleness.

The advance of his doctrines was slow at first, and they are not quite universal at present; but they early found advocates in various countries.

In England, among the earliest to embrace them and endeavor to reduce them to practice were, Dr. Tuke, Superintendent of the York Retreat, an asylum belonging to the Society of Friends, and Dr. Charlesworth, visiting physician to the Hospital at Lincoln. Dr. Tuke, being the superintend-

ent, and possessing the whole control, found but little difficulty in testing them in practice at the York Retreat. Dr. Charlesworth was only the visiting physician at Lincoln, and every step he took in reform, had to receive the sanction of a Board of Governors, before it could be taken. This rendered the task far more difficult, and the progress less rapid.

Up to 1819, it appears to have been the practice in the latter institution, for the attendants, or keepers as they were called, to chain up, or fetter the patients at their discretion. This year an order was passed by the Board of Governors, "commanding that the attendants and servants never presume to use any degree of restraint or violence, without the consent of the directors."

From this period up to 1835, there was a constant succession of orders, improvements in the means of restraint, and alterations in the construction and arrangements of the establishment for the purpose of accomplishing an object which is thus expressed in the Report of the Board for 1833: "It is unceasingly an object in this institution to dispense with, or improve as much as possible the instruments of restraint."

In 1832, Dr. Charlesworth was enabled to report that "the register of restraint shows a continual diminution in their number." "On the 10th of August, 1834, the House Visitor reported that not a single male patient had been under restraint since the 16th of July, and not one female patient since the 1st of August, and then only for a few hours; and in 1835, the Board took the opportunity of specially recording their sense of the merit of Mr. Hadwen, the House Surgeon, by expressing their high approbation of the very small proportion of instances of restraint which had occurred under his care."

This brief history of the progress of change in an institution, which may justly be regarded as a bold pioneer in the cause of reform, and in introducing a more humane treatment of the insane, is related, to indicate by their contrast with those attempted to be enforced at Lincoln, what were the prevailing sentiments on this subject at the time the Worcester Hospital was established.

Since that period, the Lincoln Asylum has gone on with its changes till it has discarded all mechanical means of restraint, and adopted a general mode of treatment quite novel and peculiar. In the meantime, many of its reforms have been copied, and have received the sanction of experience. The means of restraint, generally, have been greatly improved, and the practice relaxed, or discarded. The brick and mortar cells with iron doors, or dungeons, as they may with propriety be called, for locking up the violent, noisy, or indecent, are nowhere to be found in any recent structure, except at Taunton. There is not such a cell to be found in either of the public establishments of the great States of New York, or Pennsylvania, nor in the New Jersey State Lunatic Hospital, the design of which is quite generally regarded as a model.

With the view of examining into this subject, and the general management of Lunatic Hospitals, together with the best modes of warming and ventilating them,—a subject but very little understood at the time the one at Worcester was built, and quite imperfectly, we fear, comprehended at present,—it was deemed expedient that so many of the Trustees, with the Superintendent, as should find it convenient, should make a tour of observation of the institutions of other States.

When the time fixed upon for starting arrived, Dr. Chandler was detained by a summons to court as a witness in a capital trial, Dr. Howe was detained by sickness, and Mr. Newton declined going. These facts were learned after the other members of the Board had arrived in New York. After examining the institutions in the city and its vicinity, Mr. Ripley returned to Massachusetts, the other members of the Board continuing on through New Jersey, Pennsylvania and Western New York.

Our thanks are due to the officials of the twenty-six institutions visited by us, for the perfect cordiality with which we were everywhere received. Of these institutions, ten of them were Lunatic Hospitals. In each and all of them, every facility was extended for the most full and thorough observation. The Superintendents of the Lunatic Hospitals laid us under particular obligations, for their generous courtesy, and the very frank and unreserved manner in which they exhibited their respective establishments, together with their methods of management and modes of treatment; pointing out improvements and criticizing defects. But one spirit was manifested by them, that of doing what they could to impart information

that might be useful in constructing, improving and managing a class of institutions, which, while they are monuments of the benevolence of those who erect them, are the last hope on earth of a most unfortunate class of our fellow men.

During this tour no cell was found without a wooden floor, a wooden door, and plastered or sealed walls. And the use of such as were called strong rooms, was exceedingly limited.

In the large establishment on Blackwell's Island, containing at the time of our visit 574 patients, but two were found locked up, and those only temporarily, for a part of the day. The Superintendent, Dr. Ranny, stated that half a dozen strong rooms would be sufficient for that establishment, as not more than five or six a day were ever locked up, and those only for a few hours at a time. These rooms were furnished with iron bedsteads or frames, with sacking bottoms, and beds. They were used as sleeping apartments, and did not differ materially in size, form or appearance, from the other rooms, occupied by patients, except the doors, which were stronger.

These remarks in relation to the strong rooms on Blackwell's Island, are applicable to those in all the other establishments visited by us. In nine hospitals out of New England, containing about 2,250 patients, the number found under restraint by being locked up, was only six. In one instance only had that restraint been continued more than two days, and that one had not exceeded a week.

In the State Hospital, at Utica, but one person was found under restraint, and that one was confined in what they called a chicken-coop bedstead. There, they were in the process of demolishing their strong rooms, and removing them out of the establishment as useless. Their hospital was built some ten years after ours, and their strong rooms were comfortable apartments compared with ours, having wooden floors and plank doors, and were furnished each with a bedstead and bed.

Such are the facts as they exist in the institutions of neighboring States.

If we extend our examination to the best managed institutions of Europe, we shall find that a similar state of things prevails there.

In a private Asylum at Clermont, in France, subject to governmental supervision, in which there were 1,147 patients in

1851, the same practice obtains. Its Annual Report for that year, says: "No patient is ever shut up in his cell during the day; the strait jacket is never used, except as a means of repression, or when the patient attempts to injure himself, or others, or to destroy his clothes. It is never kept on long."

In some of the English hospitals, built pursuant to the law of 1845, requiring the counties to make provisions for their insane poor in hospitals, "padded rooms are fitted up in wards, for excited patients." But they are used only for temporary confinement.

In our Hospital at Worcester, there are forty-eight strong rooms or cells. Nearly all of them are constructed of solid masonry, with iron doors. A portion of them in the basement of the old part, have been condemned by nearly every Board of Trustees for the last ten years, as unfit for human occupancy. But the continually crowded condition of the Hospital has rendered it necessary that every part should be occupied. It was not till the class of incurable and dangerous had been reduced by the partial execution of the order of the 5th of August, that the cells in the basement of the old part, appropriated to the females, could be left unoccupied. In September they were vacated, we trust never to be occupied again by human beings. Another portion of the cells, occupied by male patients, and opening into the yard, are equally objectionable, and ought to be abandoned. They are totally unfit for human habitations. How is it possible that the furious, the violent, and the indecent, should ever be restored, while occupying apartments unfit for the abode of dumb beasts? And yet, these cells have been pretty constantly occupied, and in some instances, by the same tenants, for very long periods.

These cells were pointed out as defects, during the superintendency of Dr. Woodward. The Trustees of 1846, speaking of those "who cannot be restrained from keeping themselves in the most indecent and disgusting condition," say, "they are obliged to occupy apartments where the Trustees never visit them without feeling most sensibly, that they have not been properly cared for." In their recommendation of strong rooms to be built, for substitutes for those described, they say, speaking of a separate building which they recommend for the purpose, that "it ought to be constructed in such a manner that it may be amply ven-

tilated, and lighted, and warmed. And still further, so arranged that the patients, instead of being constantly immured in the closest confinement, may be enabled, as far as it can be permitted with safety, to go out occasionally, into adjoining yards, to see and feel the unobstructed sunshine, to breathe the purest atmosphere, and to participate in the benefits and pleasures which even such as they may derive from the care of the Divine Providence."

The new cells were built, but not in a separate building, and the yards were never constructed. The want of these is a great defect; and one, which, if properly supplied, would supersede the use of the strong rooms to a very great extent. But to render the Hospital what it should be, and enable it to retain the high reputation which it formerly possessed, and sustain that renown which the State acquired, by being the first to engage in so humane an enterprise, it is necessary that several other important repairs and improvements should be made.

The question has been raised and considered, whether it would be better to endeavor to get along for a few years, without attempting any considerable improvements, and then build in another location, and sell out the present one; or to effect the necessary improvements in the present institution, to bring it up to the requirements of the age, and the present state of science as applicable to such hospitals.

The location is such as no one would select for such an object at the present time. The land connected with it, is altogether too limited, and is badly situated; not permitting to the patients that freedom and excercise in the open air, which is desirable in such an institution. The hospital buildings are almost surrounded by city residences, and are not suitable for the uses to which they are put. They are low studded, the stories being only eight and a half, and nine feet high in the clear. They are warmed by furnaces in their basements, which are very dangerous, and now nearly worn out. They have already been on fire, at least, once from them.

Their ventilation is so imperfect as not to deserve the name. The ventiducts are each but four inches square, opening into attics from which the foul air has no means of escape. It often ascends through one ventiduct, but to return through another. But for the natural ventilation through windows and

doors, the contaminated air would often be intolerable. Its evil effects are plainly visible in the appearance of the patients. The frequent occurrence of erysipelas in the Hospital, is but one of its indices. The tables of mortality show that erysipelas stands at the head of acute diseases in fatality here; while year before last, nineteen cases are reported to have occurred from December to June, without fatality, which may give some idea of the frequency of the disease.

There is an entire want of suitable yards connected with

the buildings.

There are five separate kitchens, with all the utensils to ren-

der them severally complete.

The land is of great value, being estimated by competent judges to be worth rising two hundred thousand dollars, independent of the buildings, which would purchase land and put up another establishment in another place. These are the considerations that favor the first alternative of the proposition.

On the other hand, the improvements required are a thorough change in the mode of warming and ventilating the Hospital, connected with which, would be the reduction of the five kitchens into one, the removal of the piggeries, barn, and other nuisances from the hospital lot, and the construction of yards, properly inclosed, for the unrestricted exercise of the patients; and the construction of sewers for carrying off the wash and waste water of the establishment. The land is increasing in value, and the buildings are in a condition not to require a heavy outlay for repairs for a number of years. The pipe, or tubing used for warming, should steam or hot water be the agent employed, would not very greatly deteriorate, and could be transferred to any new establishment that might be built to take the place of the present one, at some future day. The ventilation can be improved, by the introduction of wooden ventiducts, at a moderate cost. Several establishments have had their ventilation improved in this way. Among them are the State Lunatic Hospital, at Harrisburg, one of the wings of the McLean Asylum, at Somerville, and the New Bedford Almshouse. In two of these instances, steam is the agent used for warming, and it also furnishes a motive power to effect the ventilation. This is essential; for no passive ventilation can be relied on. It must be forced to be efficient.

Large sums have been expended within a few years, for improvements and repairs. The amount paid out last year, under this head, was six thousand and ten dollars and forty-seven cents, mostly for fences, a large part of which were of iron. Other improvements must be made, if the present Hospital is to be occupied only for a few years, or till another can be built. The present furnaces are worn out, and must be replaced, in part at least; and sewers must be constructed to carry off the waste water, which now ponds in the garden, and is complained of by the neighbors as a nuisance.

The present time is favorable to this course of action. There is a balance in the treasury of \$23,162 98, which will go far towards accomplishing all that is here recommended; and whatever more should be wanted, might be raised on the credit of the Hospital, and paid from its future receipts, as there is now due from the State, towns, cities and individuals, about forty thousand dollars, in addition to the balance on hand.

The second Hospital, at Taunton, will be opened in the spring, to receive a portion of its patients, so as to enable the work to be done without great inconvenience.

Steam is the agent recommended for warming, on account of the greater facility with which it can be used, and the more extensive uses to which it can be applied, as compared with warm water, and its greater safety from fire, and the more genial warmth it imparts, as compared with hot air furnaces The frequency of fires from the latter, in all the large cities and towns, shows them to be dangerous, and that they ought never to be used in an establishment of the kind, where so many persons are locked into their rooms every night; and in case of fire, as at Augusta, Maine, many of them must inevitably perish. Fears have been entertained by the Board, for the safety of this institution, ever since that sad occurrence. This consideration, of greater safety from fire, ought alone to be sufficient to induce a change. It was the leading motive for the change at Utica, the hospital there having been on fire several times from its furnaces.

Steam is more generally used for warming large establishments than water. In addition to hospitals, almshouses and prisons, it is quite extensively used in manufacturing establishments. The first cost of an apparatus for using water is something less than for using steam, but it is believed that the latter possesses advantages over the former, more than sufficient to counterbalance the difference in the cost.

Of the twenty-six public institutions visited by us, but one, the Eastern Penitentiary, in Philadelphia, was warmed with hot water. There the water was circulated in small tubes, on Perkins's plan. It was not giving satisfaction. One wing of the State Prison at Trenton, New Jersey, had formerly been warmed in the same manner, but proving a failure, steam has been substituted with entire success.

In Massachusetts, the General Hospital in Boston, and a part of the McLean Asylum at Somerville, are warmed by means of water circulated in four-inch copper or cast iron tubes. The plan, as adopted in these institutions, gives very perfect satisfaction.

But there are no more perfectly warmed and ventilated establishments in the country than the New York Hospital, at the city of New York, the Pennsylvania Hospital, in the city of Philadelphia, the New Jersey State Lunatic Hospital, at Trenton, the State Lunatic Hospital, at Harrisburg, and the State Lunatic Hospital, at Utica. Some hospitals have been erected within a few years, in several of the Western States, perhaps as perfectly warmed and ventilated as these. In all these establishments, steam is the agent employed, and it gives very perfect satisfaction. It is not only used in them for the purpose of warming, but it is also employed in cooking and washing, and for effecting a forced ventilation. For these uses it is invaluable, as the importance of a forced ventilation cannot easily be overestimated.

The plan of employing it at Utica being the most recent, is believed to combine more of modern improvements than any other. It is probably the most perfectly arranged plan for warming and ventilating, that is to be found, either in this country or Europe. It has been introduced the past season, at a very heavy expense. Notwithstanding their hospital was built more than ten years after ours, and in architectural ar-

rangements is superior, yet the legislature of New York, with a liberality that refuses to deny any expenditure that may be necessary, to render it more perfect as an instrument for accomplishing the benevolent object of its erection, have authorized an expenditure of \$75,000 the past season. Its partitions have been taken down and built up anew, with hotair flues and ventiduets of suitable sizes in them. The amount of tubing employed for conveying the steam to warm it, is one square foot of superficial surface to every fifty cubic feet of space. The proportion employed in the other hospitals mentioned, is from one square foot to fifty, to one square foot to seventy-five cubic feet of space.

The Hospital at Utica, in all its appointments, may justly be regarded as a model institution, although its ground plan, in our opinion, is inferior to that of Trenton and Harrisburg.

Our Hospital at Worcester has not only ceased to be regarded as a model institution, but it has fallen into the rear rank in the march of improvement. Can the reputation of Massachusetts suffer it to remain there?

No definite estimates have been made, of the cost of the proposed improvements. There are about one million cubic feet of space in the whole establishment. In the portion occupied by the patients, not including the centre building, chapel, kitchens and laundry, according to a computation of the Superintendent, there are but six hundred thousand cubic feet. One million cubic feet of space, upon the maximum calculation, would require twenty thousand square feet surface of pipe or tubing. This, at sixty cents per foot, would cost \$12,000. Boilers, of sufficient size, would cost \$5,000 more. Further than this it would be impossible to make estimates, until some definite plan shall be determined on. have presented the wants of the institution for the consideration of the government, and if it shall be determined that those wants shall be supplied, there will be no difficulty in obtaining plans and estimates.

But the better course to pursue, in the opinion of a majority of the Board, is to make only such repairs as may be necessary for occupying it till another institution can be erected to take. its place, and that measures be taken immediately, for the purchase of a suitable site, and the erection thereon of the necessary buildings; and as soon as they can be completed, to evacuate the present establishment and sell it. It is believed that the hospital property will sell for enough to defray the whole expense of a new establishment, comprising all the modern improvements, without costing the State one dollar from its treasury.

One of the two schemes should be adopted immediately, and unless the legislature shall early decide upon condemning the old Hospital and building a new one, the Trustees will deem it their duty to enter upon and carry into effect the beforementioned improvements and repairs, the means for doing which are already at their command.

It will be seen by the Treasurer's Report, herewith submitted, that the receipts during the year, including a balance on hand at its commencement, of \$22,780.13, have amounted to \$76,768.51, and the expenditures to \$53,636.66, leaving a balance in the treasury, at the close of the year, of \$23,131.85.

Of the receipts, \$200 was a donation from an unknown friend of the institution, received last October by the hand of Major Enoch Flagg, of Chicopee, who stated that the donor did not wish to be known. This expression of good will to this great and most beneficent charity, is acknowledged with gratitude by its Trustees, in behalf of its beneficiaries.

The expenditures of the last year have exceeded those of the preceding, \$9,524.87. This has arisen from a variety of causes, viz.: the larger number of patients, the enhanced prices of most of the supplies, and the larger amount expended for repairs and improvements. This item is \$6,010.47, being

\$4,168.58 larger than that of the preceding year.

An iron fence has been placed on the wall in front of the Hospital, weighing twenty-four pounds, and costing \$1.75 per foot, and another by the steps up to the Hospital, weighing thirty-six pounds, and costing \$2 per foot. The two, exclusive of the arch over the entrance, cost \$2,321.75. A fence on stone posts, with wooden palings, has also been erected around the eastern garden. All these fences were determined on, and arrangements for their construction made previous to the commencement of the last year.

The law provides, that the Trustees shall fix the price of board for all but State paupers, at its actual cost. Finding

that the price established exceeded the cost, as a large surplus had accumulated in the treasury, the Trustees, at their first meeting in February, 1853, passed the following vote, viz.:—

Voted, That patients, the price of whose board the Trustees are authorized to establish, after they have been in the Hospital one year, shall be charged one dollar and seventy-five cents by the week, and no more, from and after the first day of March, 1853.

as shown by the Superintendent's statement, which makes it \$101.37 per year each. If it costs this sum per patient, when the Hospital is so crowded, with only about one attendant to thirty patients, the cost must be very considerably increased when the number of patients shall be reduced to the accommodations of the Hospital, or the proportion of attendants to patients shall be employed, which was determined on as the minimum, by the Association of Medical Superintendents of American Institutions for the Insane, at their annual meeting in Baltimore, last May.

They say, in Proposition No. XI.* " In no institution should the number of persons in immediate attendance on the patients, be in a lower ratio than one attendant for every ten patients; and a much larger proportion of attendants will commonly be desirable."

Other reforms are likewise needed; such as additional means of amusement and occupation, to divert "the mind diseased" from its vagaries and hallucinations, which, if procured, will increase the cost of board. Another consideration should not be omitted; and that is, that the second hospital, when it shall be opened, will not be able to board its patients at so low a rate. At the New York State Hospital at Utica, the cost per patient, in 1852, was \$3.18. The counties pay for the board of their paupers \$2.50 per week, while private boarders are charged considerably more, according to circumstances.

Believing that \$2 per week is quite as low as it ought to cost under existing circumstances, and less than it will cost when the number of patients shall be reduced, and the desired improvements made, the Trustees have repealed their vote of

last February, and restored the prices then reduced, to their former amount, from and after the first of next March.

There has been but one change in the official household, during the past year. Dr. Lee, the first Assistant Physician, left on the first of last October. He has been for a long period connected with the Hospital, and has uniformly given the highest satisfaction. It was with regret that the Trustees learned his determination to leave. He has gone on a tour of observation to Europe and Asia. He carries with him the highest confidence of those Trustees who have been officially connected with him, in his integrity, ability and skill, and their best wishes for his safe return and future success.

The State still retains the valuable services of the other officials, by whose assiduous care and attentive zeal, under Providence, this blessed charity has gone on for a series of years, fulfilling its mission of beneficence, restoring the lost to themselves, and gladdening the hearts of thousands.

For a more full and particular account of the affairs and condition of the Hospital, we refer to the interesting and able Report of Dr. Chandler, the Superintendent, which is herewith transmitted as a part of this Report.

FOSTER HOOPER.
SAMUEL G. HOWE.
REJOICE NEWTON.
FRANKLIN RIPLEY.
JAMES B. CONGDON.

Worcester, Dec. 26th, 1853.

TREASURER'S REPORT.

To the Trustees of the State Lunatic Hospital:
The Treasurer respectfully reports:—
That the balance in his hands at the close of the
year ending Nov. 30, 1852, was, \$22,780 13
Since which time he has received—
From the Commonwealth for support of Lunatic
State Paupers,
From cities, towns, and individuals, 30,957 53
From the Steward, for articles sold, 154 61
Interest on legacy of Ziba Storrs, 30 00
A donation from an unknown "Friend of the In-
stitution,"
\$76,780 92
Deduct excess of credit in report of 1852, 12 41
\$76,768 51
The Expenditures of the year have been as follows:-
For wages and labor,
Salary of Treasurer, 400 00
Salary of Treasurer,
Salary of Treasurer,
Salary of Treasurer, 400 00 Improvements and repairs, 6,010 47 Furniture, 1,661 58 Clothing, 1,716 77
Salary of Treasurer, 400 00 Improvements and repairs, 6,010 47 Furniture, 1,661 58 Clothing, 1,716 77 Flour, 680 barrels, 4,519 19

SAMUEL JENNISON, Treasurer.

Worcester, December 8, 1853.

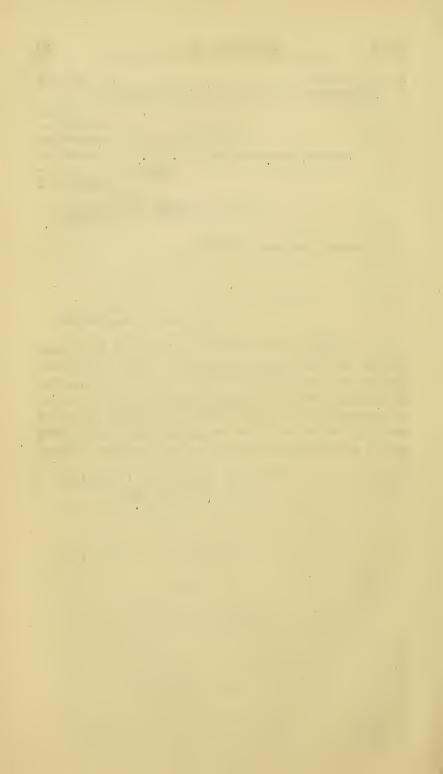

1854.]

Worcester, Jan. 23, 1854.

23

The undersigned, a Committee of the Trustees of the State Lunatic Hospital, have examined the accounts of Samuel Jennison, Esq., Treasurer of the institution, and have, in a satisfactory manner verified all its items, except that which consists of the receipts from "Cities, Towns, and Individuals," which item must be left for further examination, in order that there may be no unseasonable delay in printing the Annual Report.

JAMES B. CONGDON. S. G. HOWE.

SUPERINTENDENT'S REPORT.

Twenty-first Annual Report of the Superintendent, to the Trustees of the State Lunatic Hospital.

GENTLEMEN :- Although the year that has just passed, went by without many remarkable events to mark its progress, every day brought with it some incidents of interest to this large family. The almost daily arrival of the insane to become members of it, and the departure of those who have, for a time, sojourned with us,-the change going on in the mental condition of its individual members,—the breaking away of the cloud that obscured the mental vision of some, and the darkness settling upon the minds of others,—the wild extravagance of the conduct of some, and the melancholy repose of others,—the bold obtrusion of some, and the hesitating diffidence of others,—and that moral perversity of the feelings that causes some to lift their hands against themselves or others,all these are incidents of daily occurrence, and they occasion much anxiety on the part of those who have the care of the different departments, and demand unceasing activity and The institution has been so much crowded watchfulness. during the whole year, that the wisest direction and most wakeful vigilance could hardly be expected to have preserved us so safely as we have been. We are, therefore, ever ready to acknowledge the guiding hand of Providence in all its vast concerns.

The hospital has had its usual success in restoring to health and to their friends, a large share of those committed to its care, in ameliorating the condition of others, and in making comparatively comfortable, a large share of all within its borders.

The following annexed Tables exhibit, with the accompanying remarks, more particularly the past and present condition of the institution.

Of the Condition of the Patients in the State Lunatic Hospital from Dec. 1, 1852, to Nov. 30, 1853, inclusive. TABULAR VIEW

When the Second Hospital for the Insane, at Taunton, shall be opened for the reception of patients, we expect to be relieved of some of our surplus population. There are, in this hospital, about one hundred for whose support towns and individuals are liable, from the Cape counties including Norfolk and Suffolk. If they should be removed, and all commitments from that section of the State, be diverted from this hospital to that, this institution would probably be relieved of its crowded state for a few years. One hundred and thirty-two patients were sent to us, from those counties, the past year. We suppose we can, with propriety, send back to towns a few who could be made comfortable and taken proper care of in the new State Almshouses, when they shall be finished, and thereby be relieved of some of the more harmless and incurable State paupers.

TABLE 2.

Showing the Admissions and State of the Hospital, from Dec. 1st, 1852, to Nov. 30th, 1853.

Patients in the Hospital, December 1st, 1852, 532 Males, 264 Females, 268	Committed by Overseers of the Poor, 47 Males,
Patients admitted in the course of the year,	Private Boarders on bonds, 0 Males, 0 Females, 0
Whole number in the Hospital in the course of the year, 820 Males, 400 Females, 420	Foreigners and those who have no legal residence in this State, admitted during the year, . 106 Males, 37 Females, 69
Patients remaining in the Hospital, November 30th, 1853,	Foreigners discharged during the year,
Of the admissions, there were cases of less duration than one year,	Foreigners remaining in the Hospital at the end of the year, . 216 Males, 104 Females, 122
Of the admissions, there were cases of one year or more, . 60 Males,	State Paupers remaining in the Hospital at the end of each year, as near as they can be ascertained:— No.
Cases the duration of whose insanity before admission not ascertained, 96 Males,	1842, . . . 34 1843, 1844, 1845, 1846, 1847, 1848, 1849,
Patients committed by Courts,	1850, 181

The number of admissions is much less than it would have been, had we not declined all except those ordered here by the courts, and sent to us by the Overseers of the Poor of towns. We have advised several applicants to seek admittance to institutions in neighboring States.

Foreigners admitted, were one hundred and six, and discharged, one hundred and seventeen. They would have accumulated here, had you not removed thirty-one to make more room for those patients that remained.

By a continuation of this table, which was suggested by one extensively engaged in statistics, we see that the Irish part of the foreigners have accumulated one hundred and fifteen in the last eight years, which is as far back as they could, with certainty, be traced. Most of the foreigners are Irish; the others are from the other States of this Union, the British Provinces and several of the European countries. The Irish are almost invariably State paupers. Only three instances have come to my knowledge, of their bills, or any part of their bills, having been paid by themselves or by their friends.

Average numbe	r for t	he ye	ear,		537		~

Our average number, and our crowded state, has been greater the past year than ever before. This state of things was suffered to be so only because there was no provision at all suitable for them anywhere else. But when our number arose up to five hundred and sixty-seven, you felt compelled to order back a few to what seemed the only places they could go; and, from every place any were sent to, you are aware that remonstrance, strong and beseeching, came back to us to send them no more, and of their inability to take proper care of them in their unsuitable accommodations.

As soon as provision elsewhere can be made, the number here should be reduced to four hundred or less. The accommodations here were not designed for so large a number as four hundred. There are many objections to crowding an institution of this kind. It diminishes its remedial power; it adds greatly to the difficulty of conducting it, and increases vastly its liability to accidents, which are avoided in the best ordered establishments only by unceasing vigilance. Crowding together the violent insane is only provoking constant warfare between them. Few, I apprehend, would be found willing to be responsible for such a state of things long, or indeed be able to endure it.

The annual expenses of the hospital are materially affected by expenditures for extraordinary improvements, and by the rise or fall of supplies. Much has been done, the past year, to put in good condition the buildings and the fences. The centre building—the north wing—the south wing and the south Johonnots, have been painted on the outside. The south Johonnot, the south centre and the upper story of the south L, have been painted on the inside. Zinc was used instead of lead for all inside work, and for outside of the Johonnot wing, the roof of office, laundry, the wood and iron fences.

The iron fence erected on the bank wall, in front of the hospital, is of east iron pales three and a half feet long, passing through wrought iron bars seven-eighths of an inch thick, and

two inches wide, and weighs twenty-four pounds to the foot. It is fastened to the wall on cast iron saddles, two and a half inches high, and braced on the back side, to the wall, with wrought iron rods. This fence cost \$1.75 per foot. It is 899 feet long.

The fence each side of the steps running up to the hospital, is similar. It is 360 feet long. It stands on stone posts, and weighs 36 pounds to the foot. It cost \$2 per foot. The four large cast iron posts in this fence cost \$6 each, and the eight small ones \$4.50 each. The whole expense was \$2,321.75, not including the arch over the steps. It is painted dark green.

The fence around the east garden is about finished. It is 1,784 feet long. It stands on 223 stone posts. They are 8 feet long, 9 inches square, and set 4 feet in the ground, and 8 feet apart. Two rails 2 by 8 inches, of the best Canada pine, held by iron bolts to the posts, sustain the pickets, which are 6 feet long, 2 inches wide by $1\frac{1}{2}$ inches thick. The pickets are nailed on to the rails half an inch apart, with four nails each. The wood-work was all painted before being put together. The posts cost set, ironed for the rails, \$2 each. The whole fence would have cost, per foot, about \$1, had not three of our patients mostly prepared the wood part of it and put it together. Mr. Ball, the surveyor, fixed the grade on Central and Mulberry Streets, and on the adjoining owners. It stands wholly on the hospital land, because one of the adjoining owners, Mr. Joel Fletcher, forbid the erection between his land and the State's, of a fence in uniformity in height with all the rest around the garden. He consented that we might build the fence on the line, 6 feet high, on the grade that it now stands, by his house, about half way across his lot, and then he required that it be at least half of a foot less in height. This fence stands wholly on the hospital land. We were careful that neither the superstructure nor the substructure of it, should encroach upon the land of any highway or neighbor.

The gravel for grading up for this fence, besides the old stone wall which was buried, and the gravel for filling Mulberry Street, was taken from the knoll in the south garden. About 2,500 cart loads of it was moved for these purposes.

A very handsome summer house or arbor was erected in front of the north portico, 18 feet in diameter and 33 feet high, after a design of E. Boyden, Esq. It cost \$555.

A flagging of Bolton stone from Connecticut, 7 feet wide and $28\frac{1}{2}$ long, has been placed by the front door.

Besides the above, about the usual amount has been expended for the ordinary improvements and repairs. From present indications it is presumed, that the current expenses of the present year will be greatly enhanced by the great rise in most kinds of provisions, and by the increase of wages of those employed. It can hardly be expected that the income will be equal to the necessary expenditures; for, while the price of board of patients is very low, and while the number of patients is probably to be lessened, by being transferred to Taunton, the price of supplies has not been so high for many years.

There has been but very little of acute disease of any form, in this hospital the past year. From bowel complaints, which so often prevail in hospitals in the warm season, we have been

remarkably exempt. Notwithstanding our great freedom from acute disease, we are often reminded that we are mortal. sanity is, not unfrequently, only one of the symptoms of the breaking down of the constitution—one symptom of a fatal disease. It is an accompaniment of the last stages of consumption, of marasmus, of palsy and of epilepsy-all of them almost necessarily lead to a fatal termination. But few of the patients are blessed with the robust health of the laboring parts of the community. Most of them are suffering from disease of some organ of the body or part of the system. health is indeed one of the most prolific sources of insanity; and, in many, traces of it are distinctly visible while the mind is insane, even unto the end of life. Diseases of the digestive organs, and of the nervous system, afflict many, and yet a majority of the patients enjoy very comfortable physical existence. They eat fully and sleep soundly.

As usual, there have been several deaths from consumption and marasmus. Cases of this kind are usually brought to the hospital with the fatal disease upon them. The most we can do for such, is to relieve them of a part of their burdens, and smooth their downward path to the grave.

There have been fourteen deaths from maniacal exhaustion—a disease peculiar to insanity. Great and long continued muscular effort, accompanied with high mental excitement or delirium, and the want of sleep, characterize this form of disease. Unless the patient can be induced to take nourishment somewhat in proportion to efforts made, exhaustion soon supervenes. There is often an aversion to, and a loathing of food in these cases. We have to deplore the loss, the past year, of valuable members of society from this cause. Some chronic cases, that are periodically excited, wear themselves out in a paroxysm of violence.

Three men of three score years and ten, died of dropsy of the chest, complicated with other diseases; one of whom was Ezra Holmes, after a residence in this hospital of more than twenty years. He was a homicide, and his wife, whom he always said was kind and affectionate to him, fell by his hand, just after he had drank a glass of wine she had given, with the blessing, "Come, let us drink and forget our sorrow, and remember our poverty no more!" "In a moment, the idea," as

he afterwards feelingly related, "of Sampson and the weaver's beam," rushed into his mind, and he seized a weapon and gave her a fatal blow. He had been insane some years previous, with a species of religious_fanaticism.

TABLE 14.

Showing the Average Age at which patients were taken deranged, the average time of their derangement before and after coming to this Hospital, and their average age at the time of their death in this Hospital.

The average age the 205 females were when they died, The duration of life of the 406 of both sexes	44	0	15
The duration of life of the 406 of both sexes after becoming insane,	5	5	20

From this collection of fatal cases, we see the prospects of a continuance of life are in favor of the male over the female, both in escaping this fearful malady to a later day, and in resisting its fatal inroads upon life after its attack. While the male arrives at nearly the age of 43 years, the female is over-

taken soon after she passes the age of 39; and, while the male is able to resist its ravages over six years, the female succumbs in less than five years. The average age of the 201 males embraced in this table, when they died, was 48 years, 8 months and 13 days, while that of the 205 females was 44 years and 15 days.

The chance of life, for persons in health at corresponding periods, as calculated and acted upon by life insurance companies, is four times greater than is here exhibited, for the male, and more than five times greater for the female. This shows, pretty conclusively, that insanity, when not recovered from, tends to shorten life.

The general law, that action is necessary for the healthy condition of the mental and physical functions of the body, applies with equal force to the great majority of the insane as well as to the sane. For the growth and full development of any of these functions, well-directed exercise and efforts are essential, and constant use of them is absolutely necessary to prevent their premature decay. For the insane, after the acute stage of their disease has passed, labor or amusement greatly promotes their recovery and happiness too. When not too violent, it promotes the health of the body by increasing the appetite and the powers of digestion; it relieves the nervous system of its irritability, prepares the body for quiet repose at night, and furnishes objects for the mind to dwell upon away from its peculiar delusions. He who works or plays must pay some attention to his occupation, and in so doing, his thoughts are, for the time, diverted from the disordered channel.

Amusements, of various kinds, have been introduced, and are in constant requisition among our patients. But still, the great want of stimulus to action is a serious evil, and one not easily remedied. Many of the insane are inclined to stand or sit about our wards, listlessly dreaming over their insane fancies. We encourage and urge their engaging in some kind of employment, whether of profit or not. Such amusements as require of those that engage in them, action of the body and limbs, are better than the sedentary ones, for they directly promote the health of the body as well as the health of the mind. But chess, cards, and the magic lantern are better than nothing. Our library shows much hard use, and is daily resorted to by many who read with interest and intelligence. About seventy-five dollars are annually expended, to replenish it with miscellaneous books.

It is our rule to get out daily, all whose state of mind does not forbid it, into the open air. The males walk out in parties with their attendants, over the hills. The feeble men are carried to ride. The females have a carriage devoted to their entire use, and they also walk out in parties with their nurses. Some walk the streets unrestrained, except by their word of honor. The music, dancing and working parties are continued, as they have been for years.

Many newspapers are daily placed in the hands of our pa-

tients, but not as many as would be useful, or as is desirable. There is hardly a paper or periodical published in this State, but what would find in our family, more than one reader locally interested in its perusal. The following are sent to the hospital by their publishers, gratuitously, for which they have the thanks of our great family: - The Daily Advertiser, Evening Gazette, Olive Branch, Puritan Recorder, Christian Witness and Church Advocate, Christian Watchman and Reflector, Youth's Companion, Monthly Religious Magazine, Zion's Herald, New England Farmer, The American Patriot, and Observer, from Boston; Register, Essex County Gazette, and Advertiser, from Salem; Lynn News, from Lynn; Old Colony Memorial, from Plymouth; Assistant of the Ministry at Large, from Roxbury; Gospel Messenger, from Utica, N. Y.; Courant, from Clinton; Ægis, Spy, Palladium, and Transcript, from Worcester: Democrat, from Taunton; Chronicle, from Cambridge.

We have received, for the use of the inmates, from Hon. Charles Allen—Annual Message and accompanying Documents, 1851–2. Part 3d. Patent Office Report, 1851, Agricultural. Abstract of the Seventh Census. Congressional Globe, Vol. 24. Part 1, 2, and 3, First Session 32d Congress. Appendix to Congressional Globe, Vol. 25.

From the Hon. John Davis—The Annual Message and accompanying Documents, 1852-3. Part 2d. Patent Office Report, 1851-2, Mechanical. Annual Message and accompanying Documents—1852-3. Part 1st.

From Hon. I. McNaer-Espy's Report on Meteorology.

From Rev. S. C. Jackson—General Laws and Resolves of Massachusetts. Documents and Pamphlets.

From Miss Dix-A large roll of prints.

From one who has sent us many favors—The Proceedings of the Constitutional Convention, 1853, of Massachusetts.

From Signor Blitz—An hour and a half of most acceptible entertainment in our Chapel, in his peculiar and inimitable style, at which some three hundred of our patients were present.

The daily labor performed about this establishment, by the patients, amounts to very considerable. They mix with the attendants and assistants, in all the departments of business,

and render essential service. The fields, the gardens, the workshops, the kitchens, the laundry, and the wards, give employment to many. The results of their labor, in part, is added, as estimated by the steward. Most of the crops of the farm and gardens were abundant and profitable for the labor bestowed.

Apples,	40	barrels,	at	\$1.75.		\$70	00
Beans, dry,		l bushel		1.75,		п	87
Beets,	156	"	"	25,		39	00

Carrots, 1,845 bushels, at 30 cen	ts,			556	00
	Total	,		\$1,366	50

The religious services have been ably conducted by the Rev. Mr. Allen, who has, for more than thirteen years, sustained the relation of chaplain to this hospital. He has a very constant audience of about 350, with their attendants, and, usually, a few strangers, who make up the congregation on the Sabbath. But few worshippers demean themselves with more propriety and decorum than our patients. They listen, with much apparent satisfaction and interest, to the expounded word. The chaplain has been singularly judicious in conducting these exercises, and made them appropriate to the place and to his hearers. While he has been acceptable to most, if not all, he has offended none. He has been kind, courteous and urbane to all.

On the first of October last, Dr. John R. Lee, who has, for more than eleven years, performed the duties of Assistant Physician, resigned his office, and started on a tour of Europe and Asia. He was a skilful physician, a pleasant associate, and conscientious in the discharge of every duty. He endeared himself to the patients under his immediate charge, and, as a testimony of their regard for him, raised money and procured a likeness of him to hang in one of their wards.

To my associates in the various departments of this hospital I feel under great obligations, for the prompt and faithful manner in which they have discharged their several responsible, and often arduous, duties.

Most respectfully,

Your obedient servant,
GEORGE CHANDLER.

APPENDIX.

[From the American Journal of Insanity, No. 1, Vol. x. page 67.]

ARTICLE III.

Report "On the Organization of Hospitals for the Insane," made by the Standing Committee of the Association of Medical Superintendents of American Institutions for the Insane, at its Meeting in Baltimore, May 10th, 1853.

The proposistion, relative to the "Construction of Hospitals," having met with so universal an approval, from all connected with, or interested in, the subject, and a want, seeming to the association still to remain unsatisfied, a committee was appointed at the meeting, held in New York, last year, to draw up a series of propositions, that should, in like manner, embody the well-ascertained views of its members, in reference to the "Organization of Hospitals for the Insane," in regard to which there was no difference of opinion. As is stated in our report of the meeting at Baltimore, postea, "each proposition was taken up in detail, and minutely and fairly discussed, before it was finally accepted." As now laid before our readers, the propositions may be received as the authorized exponents of the views of the above association, "On the organization of Hospitals for the Insane."

1st. The general controlling power should be invested in the board of trustees or managers, if, of a State institution, selected in such manner as will be likely most effectually to protect it from all influences connected with political measures or political changes; if, of a private corporation, by those properly authorized to vote.

2d. The board of trustees should not exceed twelve in number, and be composed of individuals possessing the public confidence, distinguished for liberality, intelligence and active benevolence; above all political influence, and able and willing faithfully to attend to the duties of their station. Their tenure of office should be so arranged, that where changes are deemed desirable, the terms of not more than one-third of the whole number should expire in any one year.

3d. The board of trustees should appoint the physician, and, on his nomination, and not otherwise, the assistant physician, steward, and matron. They should, as a board, or by committee, visit and examine every part of the institution, at frequent stated intervals, not less than semi-monthly, and at such other times as they may deem expedient, and exercise so careful a supervision over the expenditures and general operations of the hospital, as to give to the community a proper degree of confidence in the correctness of its management.

4th. The physician should be the superintendent and chief executive officer of the establishment. Besides being a well educated physician, he should possess the mental, physical and social qualities, to fit him for the post. He should serve during good behavior, reside on, or very near the premises, and his compensation should be so liberal, as to enable him to devote his whole time and energies to the welfare of the hospital. He should nominate to the board suitable persons to act as assistant physician, steward, and matron; he should have the entire control of the medical, moral and dietetic treatment of the patients, the unrestricted power of appointment and discharge of all persons engaged in the care, and should exercise a general supervision and direction of every department of the institution.

5th. The assistant physician, or assistant physicians, where more than one are required, should be graduates of medicine, of such character and qualifications as to be able to represent and to perform the ordinary duties of the physician, during his absence.

6th. The steward, under the direction of the superintending physician, and by his order, should make all purchases for the institution, keep the accounts, make engagements with, pay and discharge those employed about the establishment; have

a supervision of the farm, garden and grounds, and perform such other duties as may be assigned him.

7th. The matron, under the direction of the superintendent, should have a general supervision of the domestic arrangements of the house, and, under the same direction, do what she can to promote the comfort and restoration of the patients.

8th. In institutions containing more than 200 patients, a second assistant physician, and an apothecary, should be employed, to the latter of whom, other duties, in the male wards, may be conveniently assigned.

9th. If a chaplain is deemed desirable, as a permanent officer, he should be selected by the superintendent, and, like all others engaged in the care of the patients, should be entirely under his direction.

· 10th. In every hospital for the insane, there should be one supervisor for each sex, exercising a general oversight of all the attendants and patients, and forming a medium of communication between them and the officers.

11th. In no institution should the number of persons in immediate attendance on the patients, be in a lower ratio than one attendant for every ten patients, and a much larger proportion of attendants will commonly be desirable.

12th. The fullest authority should be given to the superintendent, to take every precaution that can guard against fire or accident, within an institution, and to secure this, an efficient night-watch should always be provided.

13th. The situation and circumstances of different institutions, may require a considerable number of persons to be employed in various other positions; but, in every hospital, at least all those that have been referred to, are deemed not only desirable, but absolutely necessary, to give all the advantages that may be hoped for, from a liberal and enlightened treatment of the insane.

14th. All persons employed in the care of the insane, should be active, vigilant, cheerful, and in good health. They should be of a kind and benevolent disposition, be educated, and, in all respects, trustworthy, and their compensation should be sufficiently liberal to secure the services of individuals of this description.
